PROFESSIONAL PROFILE

Recent graduate in systems administration (ASIR) with a Master's in Cybersecurity, which left me with a foot in two worlds: keeping infrastructure running and understanding how it gets attacked. I have built a home SOC with Wazuh where I launch real attacks, tune detection rules and document each alert as an incident report mapped to MITRE ATT&CK, alongside hardening and offensive labs in Linux and Windows. I'm looking for my first role in a security team, ideally in a SOC, where I can put this to real use and keep learning.

PROFESSIONAL EXPERIENCE

Systems Administrator, Nubemedia (Internship)

Mar 2025 – Jun 2025

During my internship I looked after Apache and Nginx web servers on Linux, working on tuning their performance and cutting response times by around 20%. I also handled several WordPress environments (updates, plugin reviews, security hardening and backups) and applied technical SEO improvements across client sites. I documented the procedures I followed, which became part of the team's internal knowledge base.

Security & Host Assistant, Arsel Business S.L.

Oct 2023 – Mar 2024

Access control, store opening and closing, and customer flow management in luxury retail stores (Louis Vuitton, Celine, Moncler), following strict security protocols. The role meant staying alert, following procedures closely and reacting quickly when something came up.

Hospitality Staff, Various Establishments

2017 – Present

Years of customer-facing work in fast, demanding settings, often juggling several things at once. It is where I built the resilience, communication and stress management I bring to any team I join.

PERSONAL PROJECTS & LABS

Home SOC Wazuh Lab · github.com/TechAdminPro/home-soc-wazuh-lab

Built a mini-SOC with Wazuh (manager, indexer and dashboard), an Ubuntu victim and a Kali attacker. Detected SSH brute force, port scanning and /etc/passwd tampering (FIM), deployed a custom correlation rule and UFW decoder, and documented three incidents with timeline, IOCs and remediation mapped to MITRE ATT&CK.

BadUSB Endpoint Analysis · Master's Thesis · github.com/TechAdminPro/badusb-endpoint-analysis

Used a Flipper Zero to run physical BadUSB (HID injection) attacks against Windows 11, analysed how Microsoft Defender reacted, and proposed technical and organizational mitigations.

Web Security Audit Lab (DVWA) · github.com/TechAdminPro/web-security-audit-lab

Found and exploited six vulnerabilities (brute force, SQL and command injection, file inclusion, insecure uploads, weak cryptography), documenting each one and rating it with OWASP Top 10 and CVSS.

Linux Hardening Lab · github.com/TechAdminPro/linux-hardening-lab

Hardened an AlmaLinux server audited from Kali: secure OpenSSH, SFTP with chroot, ACLs, iptables firewall and ICMP mitigation, verified with Nmap, tcpdump and Wireshark.

SYN Flood (DDoS) Lab · github.com/TechAdminPro/syn-flood-lab

Simulated a SYN Flood against AlmaLinux with hping3, analysed the traffic in Wireshark and applied SYN cookies, reverse path filtering and iptables rate limiting.

EDUCATION

MSc in Cybersecurity

Fundación San Pablo CEU
2025 – 2026

Higher Technician, ASIR

Network & Systems Administration · CEU
2023 – 2025

CERTIFICATIONS

Cisco CCNA · Networking & Routing/Switching · 2024

CompTIA Security+ · in progress, 2026

Hack4U Academy · Ethical Hacking & Pentesting · in progress

LANGUAGES

Spanish: Native
English: C1 Advanced

TECHNICAL SKILLS

Security Operations

Wazuh (SIEM/XDR), log analysis, detection rules, FIM, incident reporting, MITRE ATT&CK

Offensive & Network Security

Kali Linux, Nmap, Metasploit, Hydra, Wireshark, tcpdump, Burp Suite, OWASP Top 10, iptables

Systems & Networking

Linux, Windows Server, Active Directory, VMware/VirtualBox, TCP/IP, DNS/DHCP, VPN, Apache/Nginx, WordPress

Currently learning

AWS, Python, Docker, Bash scripting, TryHackMe

STRENGTHS

- Performs well under pressure
- Methodical troubleshooting and documentation
- Strong attention to detail
- Clear communication
