PROFESSIONAL PROFILE

I recently finished my studies in systems administration (ASIR) and a Master's in Cybersecurity, which left me with a foot in two worlds: keeping infrastructure running and understanding how it gets attacked. Most of my hands-on practice comes from building and hardening Linux and Windows setups in my own labs, alongside the offensive and defensive techniques I picked up during the Master's. I'm now looking for my first role in security, somewhere I can keep learning and put all of this to real use.

PROFESSIONAL EXPERIENCE

Systems Administrator — Nubemedia (Internship)

Mar 2025 - Jun 2025

During my internship I looked after Apache and Nginx web servers on Linux, working on tuning their performance and noticeably cutting down response times. I also handled several WordPress environments — updates, plugin reviews, security hardening and backups — and applied technical SEO improvements across client sites. I documented the procedures I followed, which became part of the team's internal knowledge base.

Security Assistant — Arsel Business S.L.

Oct 2023 - Mar 2024

I worked in access control and physical security at high-end retail sites, keeping a clean record with no incidents. The role meant staying alert, following security protocols closely and reacting quickly when something came up — the kind of situational awareness and composure under pressure that translates well into a SOC environment.

Hospitality Staff — Various Establishments

2017 - Present

Years of customer-facing work in fast, demanding settings, often juggling several things at once. It is where I built the resilience, communication and stress management I bring to any team I join.

PERSONAL PROJECTS & LABS

Linux Hardening Lab · github.com/TechAdminPro/linux-hardening-lab

Hardened an AlmaLinux server from scratch and audited it from Kali. I configured OpenSSH securely, restricted a user to SFTP with chroot, managed permissions with ACLs, built an iptables firewall and mitigated ICMP, then verified the result with Nmap, tcpdump and Wireshark.

Web Security Audit Lab (DVWA) · github.com/TechAdminPro/web-security-audit-lab

A web pentesting exercise where I found and exploited six vulnerabilities — from brute force and SQL/command injection to file inclusion, insecure uploads and weak cryptography — documenting each one and rating it with OWASP Top 10 and CVSS.

BadUSB Endpoint Analysis · Master's Thesis

I used a Flipper Zero to run physical BadUSB (HID injection) attacks against Windows 11, analysed how Microsoft Defender reacted, and proposed both technical and organizational ways to defend against them.

SYN Flood (DDoS) Lab · github.com/TechAdminPro/syn-flood-lab

I simulated a SYN Flood denial-of-service attack against AlmaLinux using hping3, observed the traffic in Wireshark, and applied mitigations — SYN cookies, reverse path filtering and rate limiting with iptables — to see how the server held up.

EDUCATION

MSc in Cybersecurity

Fundación San Pablo CEU
2025 - 2026

Higher Technician — ASIR

Network & Systems Administration · CEU
2025

CERTIFICATIONS

Cisco CCNA · Networking & Routing/Switching

CompTIA Security+ · in progress, 2026

Hack4U Academy · Ethical Hacking & Pentesting · in progress

LANGUAGES

Spanish — Native

English — C1 Advanced

TECHNICAL SKILLS

Systems & Networking

Linux, Windows Server, Active Directory, VMware/VirtualBox, TCP/IP, DNS/DHCP, VPN, Firewall

Cybersecurity

Kali Linux, Nmap, Metasploit, Wireshark, Burp Suite, OWASP Top 10, Web Pentesting, iptables

Web & Tooling

WordPress, Apache/Nginx, Technical SEO, Bash scripting, Git/GitHub

Currently learning

AWS, Python, Docker, TryHackMe

STRENGTHS

- Performs well under pressure
- Strong attention to detail
- Problem-solving mindset
- Clear communication
